DETAILED ACTION

Response to Amendment

1. The objection to the specification is withdrawn in view of the amendments filed 5/19/05.
2. Applicant's arguments, see page 9, filed 5/19/05, with respect to claims 1, 12 and 15 have been fully considered and are persuasive. The rejection of claims 1-21 has been withdrawn.

Allowable Subject Matter

3. Claims 1-21 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter: Claims 1, 12 and 15 recite the combination of a speech coding method, using perceptual weighting, that determines at least one pitch value from a speech signal, characterizes the voicing of the speech signal, trains a Lloyd-Max quantizer only with the pitch values of those speech signals that are characterized as being fully voiced, and finally quantizing the pitch values of speech signals that are both fully voiced and partially voiced.
5. Rothweiler teaches a method of coding speech comprising the steps of:
sampling a speech signal (A/D converter, Fig. 1, element 14);
determining a pitch of the speech signal (pitch epoch detector, col. 8, lines 11-13);

characterizing the voiced quality of the speech signal (determination of the signal being voiced or unvoiced, col. 9, lines 62-67 and col. 10, lines 8-12);

implied training a Lloyd-Max quantizer (col. 13, lines 30-32); and

quantizing the pitch values (pitch quantized by differential quantizer, col. 17, lines 37-47) from the training step and the pitch values of those speech signals from the determining step not characterized as being substantially fully voiced in the characterizing step (determines the pitch for all voice segments hence the averaging would take into account all voiced and unvoiced segments, col. 10, lines 23-36).

6. Nishiguchi teaches a speech coder that performs a voicing decision, pitch calculation and uses perceptual weighting.

7. None of the prior art on record teaches training a Lloyd-Max quantizer using only the pitch information from substantially fully voiced speech signals and using this quantizer to quantize speech signals characterized both as being both fully voiced and partially voiced. It would not have been obvious to one of ordinary skill in the art at the time of invention to modify the art on record to arrive at the applicant's invention.
